

External Networks Price Schedule, effective from 1 April 2014

How to use this schedule:

Where a choice of tariff plan is available for a customer type this is represented in a row within the table. Hence, a single row applies to every customer.

External Network Customers (Auckland, Cambridge, Christchurch, Warkworth and Wellington)				
	Estimated number of customers	Daily Fixed Charge (\$/day)	Continuous Supply (\$/kWh)	Controlled Supply (\$/kWh)
Low User (1651)		601	602	603
Continuous, 24h	2086	0.1270	0.1084	
Mixed, 24h	193	0.1270	0.1084	0.0139

Notes:

1. All prices stated above are exclusive of GST.
2. The transmission component of the total line charges listed above equates to an average of 26%.
3. The estimated number of customers is for 1 April 2014.
4. An external network customer is a customer connected to WEL's embedded networks located in Auckland, Cambridge, Christchurch, Warkworth or Wellington. No other price category applies to these customers.

Explanation of how each charge is applied:

- a. Fixed charge: Fixed charge: is the charge that applies to each day or month of connection.
- b. Continuous supply charge: are charges that apply under normal operating circumstances to the continuously available electricity supply.
- c. Controlled supply charge: Are charges that apply under normal operating circumstances to the electricity supply that is capable of being interrupted (switched off) by WEL using remote technology for up to seven hours per day. This charge is multiplied by the volume of energy used, measured in kilowatt hours (kWh). This type of supply is typically connected to hot water cylinders and other interruptible appliances nominated by the customer. To be eligible, this supply must be separately metered from any continuous supply. Combined metered supplies (Continuous and Controlled) will be charged at the continuous rate.
